PROFESSIONAL SUMMARY

Full Stack Developer with 4 years of experience building scalable enterprise applications using Python (Frappe Framework/ FastAPI/ Django), ReactJS/ VueJS. Experienced in developing systems deployed across 500+ branches, integrating ERP and delivering client-facing solutions. Strong in Backend development, system integration, and translating business requirements into robust technical solutions.

WORK EXPERIENCE

Neurosoft Technologies Limited Software Engineer

[June '22 – Present]

- **PAMS (JICA, Planning Ministry – SPIMS Project)** [June '22 – Feb '24]
 - Designed and Built backend modules for **DPP** (Development Project Proposal), **MAF** (Ministry Assessment Format), and **SAF** (Sector Appraisal Format). Digitizing government project appraisal processes via building **Project Assessment and Appraisal Management System**
 - Built and maintained **REST APIs** for seamless integration with external system (PPS)
 - Implemented reliable bidirectional data exchange between systems
 - Developed dynamic **document generation and print formats**
 - Delivered **hands-on training sessions to government officials**, ensuring smooth system adoption. **Across 6 batches of ~35 participants each.**
 - 98%** of all government Ministries/Divisions were reached for training on the Ministry Assessment Format (MAF). **50%** of the Planning Commission's Sector Division were trained on the Sector Appraisal Format (SAF).
 - Gathered and analyzed client requirements through **direct stakeholder communication**
 - Translated business needs into **technical specifications and backend solutions**
 - Actively incorporated client feedback into iterative product improvements

Tech Stack: Python, Frappe Framework, MariaDB, REST API, Jinja2, wkhtmltopdf, JS, Git, Linux

- **Accuvat (Neurosoft Technologies Limited)** [Jan '23 – May '26]
 - Engineered backend modules for **Purchase, Sales, Returns, Adjustments, Deposits, and VDS workflows** for VAT Management System (**Accurate VAT Calculation**).
 - Implemented business logic for VAT calculation and regulatory compliance
 - Built reporting and document generation features for financial operations
 - Improved system maintainability through modular backend design

Tech Stack: Python, Frappe Framework, MariaDB, REST API, Jinja2, wkhtmltopdf, JavaScript

- **HPM (Singer Bangladesh Limited)** [Aug '24 – Nov '25]
 - Designed and implemented a scalable **Hire Purchase Management** system deployed across **500+ branches**
 - Digitized customer and guarantor workflows, eliminating manual paperwork and legacy forms
 - Integrated with **ERP (Singer Information System)** and **National NID verification service** for secure identity validation

- Implemented **real-time data capture, GPS tracking, and audit logging system** for field operations
- Built dashboards and reporting tools for branch and head office performance monitoring
- Collaborated directly with stakeholders through **regular client meetings**, translating business requirements into system features
- Provided **active customer support**, resolving operational issues and ensuring system reliability
- Conducted system demonstrations and user training (onsite and online) for end users **across 3 batches of ~80 participants each**, improving adoption across distributed branches.
- Translated business needs into **technical specifications and backend solutions**
- Actively incorporated client feedback into iterative product improvements
- Formulated An Android Mobile App for field inspection.

Tech Stack: Python, Frappe Framework, MariaDB, REST API, JavaScript, Git, Linux

- **AEB Social [Mobile App] (Neurosoft Technologies Limited)** [Dec '25 – Jan '26]
 - Integrated **Meta (Facebook) Graph API** for automated posting (feed, photos, videos)
 - Integrated **Telegram Bot API** for bulk messaging functionality
 - Implemented logging system for tracking success/failure of operations
 - Managed authentication, tokens, and user credential systems

Tech Stack: React Native (Expo), TypeScript, Meta Graph API, Telegram API

- **Institutional ERP System (Rahima-Fazal Model School, Gazipur)** [Jan '26 – May '26]
 - Deployed a centralized ERP (Education Focused) utilizing ERPNext powered by Frappe Framework to manage admissions, academics, and student financials.
 - Automated administrative workflows for scheduling class and exams, grading, and attendance tracking to reduce manual data entry.
 - Designed custom Jinja2 templates for automated document generation, including transcripts and financial receipts, attendance reports, etc.

EDUCATION

B.Sc. in Computer Science and Engineering

North South University, Dhaka

Completion Year: 2022 (January)

CORE SKILLS

Languages:

- Python, JavaScript, TypeScript, Java, C, C++

Frameworks/ Tools:

- Frappe Framework, FastAPI, Django, Django REST Framework, React.js, React Native, HTML, CSS, Jinja2, Wkhtmltopdf, Git, GitHub, PyTorch, Langchain, Linux OS (among others)

Concepts:

- REST API, Backend Development, System Integration, Database Design, Scalable Systems, Software Design Patterns, Software Design Principles, Relational Database, SRS, SDS, Machine Learning (Data Exploration and Modelling), Deep Learning (Computer Vision and NLP) etc.

Databases:

- MariaDB, PostgreSQL, MySQL, SQL, SQLite
